Objective

Motivated Mechanical Engineering graduate from Alexandria University (Class of 2025) seeking an entry-level opportunity in the MEP field. Familiar with HVAC, Firefighting, and Plumbing systems, with practical knowledge of design based on Egyptian codes. Proficient in AutoCAD, Revit, and MS Office, and eager to contribute to building services projects while developing professionally within a leading engineering consultancy or contracting firm.

Academic Qualifications

- Alexandria University – Faculty of Engineering
- Bachelor of Science in Mechanical Engineering | 2025 | GPA: 2.56

Graduation Project

- Analyzed vehicle lateral dynamics and cornering performance using Magic Formula tire model.
- Performed simulations for cornering, braking, and bumping to assess suspension stability.
- Validated results with real-world data and optimized suspension parameters for better performance

Internships

Global Energy For Investment and Industry

Alexandria – May 2026

- Modeled a full MEP system (HVAC, drainage, water supply, firefighting) for a shops complex using Autodesk Revit
- Designed outdoor condensing units, plus drainage for FCU condensate and bathrooms.
- Developed the water supply system and modeled the firefighting system (cabinets, FM200, CO2).
- Supported site infrastructure design and multi-discipline MEP coordination.

Misr Chemical Industries Co. (M.C.I)

Alexandria – Jul 2024

- Observed the operation and maintenance of industrial pumps, air compressors, and chillers.
- Learned about different sealing systems and their applications in rotating equipment.
- Followed maintenance activities and troubleshooting procedures for mechanical systems.
- Gained practical exposure to industrial utilities and plant operation workflows.

Rashid Petroleum Company (RASHPETCO)

Rashid - July 2023

- Gained exposure to oil & gas field operations and HSE regulations.
- Observed the operation and maintenance of centrifugal pumps, compressors, and turbine systems.
- Learned about mechanical seals, diesel engine components, and pipe fitting systems.
- Participated in site walkthroughs to understand equipment operation and maintenance procedures.

Abu Qir Electricity Power Plant

Alexandria – Aug 2022

- Observed the operation of steam turbines and boiler systems used in power generation.
- Learned about different types of bearings and their applications in rotating equipment.
- Followed maintenance procedures and operational workflows inside the power plant.
- Gained basic understanding of thermal power generation systems and industrial safety practices.

Skills

SolidWorks | MATLAB | AutoCAD| Revit | Hap | Duct sizer | Pipe Sizer | Office tools

Language

- Arabic : Native
 - English: Professional Working Proficiency
